

Ecocert support arrangements

Who can receive this support?

Eligible organisations are non-profit organisations or bodies whose purpose is environmental protection or raising awareness of environmental causes. We wish to support and guide such entities for practical projects. Grassroots action is our priority.

Characteristics of preferred projects:

- All projects must be connected with environmental protection:
- They may take various forms:
 - o Awareness-raising and information actions
 - o Educational projects
 - o Practical measures (reforestation, animal welfare activities, etc.).
- Such projects are to have attainable and easily measured objectives.
- They must be run by organisations that are recognised for their commitment and/or volunteers.

The following are not eligible:

- Events of a militant or political nature
- Activities or events incompatible with environmental protection (e.g. car rally)
- Funding of training.

Subsidies:

Ecocert sets the budget for subsidies and partnerships annually. The amount allocated may vary depending on the project. As a business, we feel free to select those projects that most grab our attention.

We can provide not only financial support, but also in terms of equipment, logistics or people (staff, conferences).

Project selection:

Projects are selected once applications have been studied. We essentially give preference to actions working for environmental protection or raising the general public's awareness.

Project monitoring:

We ask project champions to provide us with a one-page report, accompanied if applicable with evidence of payment of expenses incurred for which our subsidy was used. For projects lasting longer than six months, we request quarterly reports.

Documents requested:

An application including:

- A presentation of the non-profit organisation or body
- Project champions
- Planned actions
- Period and location
- Objectives and expected results
- Definite and potential partners
- Your request

Send us your partnership application:
